### SDA Finalist for 2011 Logistics Best Practice Award

Minneapolis, MN - October 25<sup>th</sup>, 2011 Today, the World Trade Group notified System Design Advantage (SDA) that they are a finalist for the North American Supply Chain Distinction Awards for the Logistics Best Practice Award. This award recognizes companies that drive logistics excellence throughout their organization through developing efficient, sustainable, and cost effective strategies. The aim is to promote and recognize outstanding achievements in the field of transport & distribution operations, processes, and services.

SDA's central distribution centers allow clients to focus efforts on their core competencies and customers. SDA uses real-time systems and parts serialization to track repair orders, shipping status, and inventory information to ensure accurate and efficient on-time delivery. Utilization of these systems has allowed SDA to achieve 99.994% on-time delivery performance and 99.991% inventory cycle count accuracy. On-time deliver service level agreements include 90% same-day order fulfillment requirements and 7 X 24 available coverage. Within these systems, System Design Advantage manages multiple inventories, both customer owned and SDA stock, with physical and systemic controls that prevent co-mingling of product. By leveraging System Design Advantage's distribution center and repair depot services, companies benefit financially and are able to optimize their own operational networks.
